AB Calcium is a ubiquitous second messenger controlling a broad range of cellular functions. We previously observed that N,N-dimethyl-Dribophytosphingosine (DMPH) and lysophosphatidylcholine (LPC) induced Ca²⁺ influx across the plasma membrane in U937 monocytes. In this study, we characterized the Ca²⁺ influx induced by DMPH and LPC. L-type voltage-gated Ca²⁺ channel blockers, verapamil and nifedipine, significantly reduced LPC-induced Ca²⁺ influx, but not DMPH-induced one. On the other hand, non-specific Ca²⁺ channel blockers, Ga³⁺ and La³⁺, considerably reduced DMPH- and LPC-induced Ca²⁺ influx. Preincubation of the cells with forskolin enhanced DMPH-induced Ca²⁺ influx, however, LPC-induced Ca²⁺ influx was not affected by the treatment. The enhancement by forskolin was blocked by KT5720, a PKA inhibitor. We also confirmed the presence of TRPM7 and absence of TRPM3 in U937 cells. Therefore, our characterization of Ca²⁺ influx in U937 human monocytes shows the presence of two different types of Ca²⁺ channels modulated by lysolipid mols., DMPH and LPC. LPC may induce Ca²⁺ influx via L-type Ca²⁺ channels and DMPH seems to induce Ca²⁺ influx through TRPM7 in U937 human monocytes.

AB A composition and a kit for treating cancer comprises N, N-dimethylphytosphingosine. The composition represses the activity of sphingosine kinase and therefore intercepts various mechanisms which sphingosine kinase induces. For example, the composition blocks the phosphorylation of ceramide and sphingosine, thereby maintaining high concentration of ceramide and sphingosine. The ceramide and sphingosine induce apoptosis in cancer cells. Therefore, the composition of the invention induces apoptosis in cancer cells and accordingly kills the cancer cells. The N,N-dimethylphytosphingosine can also be used to treat other conditions. A process for producing N,N-dimethylphytosphingosine is also disclosed.
